

INTEGRATED CENTER STACKS

JVIS has recently developed various “Integrated Center Stack” assemblies for some of the most popular vehicles on the road. These assemblies combine Radio, HVAC and Vehicle Feature Controls into one main unit within the vehicles instrument panel. The technology provides the flexibility for the operator to use touch screen or the standard mechanical controls. This integration requires extensive knowledge of plastics, paint, electrical hardware and software required so it can support the CANBUS system in the vehicle. This concept will save weight, improve performance, overall fit and finish and ergonomics of the entire system. If you require more information, please **contact us** on our website or by using the information listed to the right.
