

AIR OUTLET ASSEMBLIES

JVIS currently offers air outlets to the automotive industry that are utilized in instrument panels, overhead systems, hard trim and other interior systems. JVIS produces outlets that meet all customer requirements including volumetric air flow by utilizing computational fluid dynamics (CFD) early in the design process to ensure optimization of component and system design. JVIS outlets are designed to minimize and/or eliminate any perceived audible sound from air flow, and are optimized based on customer required efforts (both limits and consistency). In addition, JVIS air outlets are not only functional, but also decorative. JVIS offers air outlets that incorporate the use of various interior finishes including painted and mold in color (MIC) metallic trim bezels, as well as bright and colored chrome accents. At JVIS, we design, develop, validate and produce interior air outlets that exceed customer expectations. If you require more information, please **contact us** on our website or by using the information listed to the right.
